### AMENDMENTS TO THE CLAIMS

**Please amend the Claims 10-11 and 14-15 as follows. Insertions are shown underlined while deletions are struck through. Please cancel claims 1-9 and 20.**

1-9 (canceled):

10 (currently amended): An electrochemical cell which comprises a cathode containing a proton-conducting compound as an electrode active material, an anode containing a proton-conducting compound as an electrode active material and an electrolyte containing a proton source, wherein at least one of the cathode and the anode is the an electrode comprising a proton-conducting compound and an anion-exchange resin, said anion-exchange resin being a fiber, as claimed in Claim 1 and wherein the electrolyte is an aqueous solution containing a proton-ionizing electrolyte.

11 (currently amended): An electrochemical cell which comprises a cathode containing a proton-conducting compound as an electrode active material, an anode containing a proton-conducting compound as an electrode active material and an electrolyte containing a proton source, wherein the cathode is the an electrode comprising a proton-conducting compound and an anion-exchange resin, said anion-exchange resin being a fiber, as claimed in Claim 1 and wherein the electrolyte is an aqueous solution containing a proton-ionizing electrolyte.

12 (original): The electrochemical cell as claimed in Claim 10, wherein the electrochemical cell is operable such that as a charge carrier, protons are exclusively involved in a redox reaction of the active materials associated with charge/discharge in both electrodes.

13 (original): The electrochemical cell as claimed in Claim 10, wherein the electrolyte is an acid-containing aqueous solution.

14 (currently amended): A storage device comprising an electrochemical cell which comprises a cathode containing a proton-conducting compound as an electrode active material, an anode containing a proton-conducting compound as an electrode active material and an electrolyte containing a proton source,

wherein at least one of the electrodes in the electrochemical cell is the an electrode comprising a proton-conducting compound and an anion-exchange resin, said anion-

exchange resin being a fiber, wherein the electrolyte is an aqueous solution containing a proton-ionizing electrolyte as claimed in Claim 1, and

wherein a plurality of the electrochemical cells are electrically connected.

15 (currently amended): A storage device comprising an electrochemical cell which comprises a cathode containing a proton-conducting compound as an electrode active material, an anode containing a proton-conducting compound as an electrode active material and an electrolyte containing a proton source,

wherein the cathode in the electrochemical cell is the an electrode comprising a proton-conducting compound and an anion-exchange resin, said anion-exchange resin being a fiber, wherein the electrolyte is an aqueous solution containing a proton-ionizing electrolyte as claimed in Claim 1, and

wherein a plurality of the electrochemical cells are electrically connected.

16 (original): The storage device as claimed in Claim 14, wherein the electrochemical cells are connected in series.

17 (original): The storage device as claimed in Claim 16, wherein the electrochemical cells are stacked.

18 (original): The storage device as claimed in Claim 14, wherein the electrochemical cell is operable such that as a charge carrier, protons are exclusively involved in a redox reaction of the active materials associated with charge/discharge in both electrodes.

19 (original): The storage device as claimed in Claim 14, wherein the electrolyte in the electrochemical cell is an acid-containing aqueous solution.

20 (canceled):
